

## LMS Select is a modular learning management system designed to help organisations rapidly meet their training requirements.

LMS Select is Cobent's modular learning management system that enables organisations to rapidly implement a training system specific to their learning requirements. Built on the proven technology of Cobent's signature product 'Learning Compliance Suite' (LCS), LMS Select is perfect for organisations with straightforward or discrete training projects, that don't need a full enterprise system.

The modular platform allows organisations to add new functionality as and when it is needed. LMS Select provides the convenience, cost-effectiveness and rapid deployment of an 'off-the-shelf' system, with the configurability and individual business logic of a customised system.

### How it works

LMS Select works on a 3 tier model and consists of **Standard, Training Delivery and Optional** levels. Using Cobent's easy-to-use web-based 'Selector' tool, you can select the features needed to manage your specific type of training. Details are submitted online and a member from the Cobent team will contact you to discuss requirements further. With this model you can expect a rapid turnaround from decision to system 'go-live'.

### LMS Select - Standard

LMS Select comes with 3 preconfigured modules to provide the core functionality needed to effectively manage your training: User, Content, and Reports, these modules will enable your organisation to:

- Manage users by custom groups e.g. job-roles, departments, location
- Assign and manage e-learning content
- Report on training completion via pre-configured reports

### LMS Select - Training Delivery

By selecting one or more modules from the Training Delivery level, you will enhance the functionality needed to manage specific training types. These modules include:

#### Classroom

From automated notification of attendance, instructor allocation, sign-off, to managing equipment and venue hire, the Classroom module allows you to manage all aspects of classroom training.

#### Content Authoring

The Content Authoring module is great for organisations with courses which require regular updating. This module provides the tools needed to instantly create and manage simple e-learning content, whenever you want.

#### Assessments

Measure training success with the Assessments module. Create, manage and assign questions and assessments to suite your training programmes. Choose from a number of questions types; including drag and drop, true or false or multiple choice.

### Benefits Highlighted:

- Designed for rapid implementation and easy expansion
- The modular platform lets you choose and pay only for what is required
- Use the 'Selector' tool to easily build your own system
- Deploy, track, manage and report on training to your requirements
- Reduce administration and training cost through automation
- Perfect for organisations with straightforward training requirements or discrete training projects

## SCORM Management

Track, manage and report on courses to a high level of granularity, with the SCORM management module. Easily import pre-existing, bespoke or off-the-shelf SCORM standard e-learning content.

## LMS Select - Optional

Enhance Cobent LMS Select with additional modules.

## Content Workflows

Use the Content workflows module to manage the approval process of course content to maintain consistency and quality.

## On-the-Job (OJT) & Activity-based Training

Experiential or activity based training can be tracked and managed with this module. It provides centralised management and control over training which falls outside of e-learning and classroom type training.

## Compliance

Ensure your training processes meet Compliance and quality standards with the compliance module. Validate training with e-signatures; manage system access and security with advance permission settings; and maintain a full audit trail that is available for full interrogation.

## Noticeboards & News

Make LMS Select's student interface the focal point for sharing either company or training related news and announcements. Manage news feeds and announcements based on pre-defined user groups, relay these news feeds to multiple websites.

## Custom User-Interface

The Custom User Interface module gives organisations full access to modify the look and feel of the student interface, providing the flexibility for meeting multiple branding requirements.

## E-Commerce

Extend your product and service offering online. With the E-Commerce module, your customers are able to purchase courses or sign-up via the learning portal.

## Custom Forms

Use web-based forms to capture user information e.g. pre course questionnaires, feedback forms, surveys etc.

## Forums

Open up discussions between users and administrators with the Forums module – ask questions or share information on particular courses or within particular groups.

## Document Management

Manage document training using the document management module. Full version control and automatic training reassignment based on rules.

## Certificates

Branded certificates can be automatically awarded to individuals based on predefined rules using the Certificates module.

## Notifications

Notify users of tasks and training requirements with the notifications module, reduce costs associated with follow ups.

## System Configuration

Increase flexibility and management capability with the System Configuration module. Create custom user, advanced content and course management properties to meet training requirements.

## Advance Content Authoring

Create highly interactive e-learning content, with the advanced authoring tool. Embed audio, video, flash and other multimedia assets, build dynamic assessments, use e-learning assets and templates for rapid content development.

Visit [www.cobent.com](http://www.cobent.com) for more information and to try the LMS Selector tool!

## Cobent Services:

- Supply and implementation of fully compliant learning management tools.
- Supply and implementation of collaborative authoring tools.
- Consultancy and advice based on 'best-practice' knowledge and industry experience
- Development of bespoke content based on specific learning and business requirements
- Supply of off-the-shelf content for rapid deployment

## Cobent Selected Clients:

*"Cobent has been an excellent investment for DSGi. The support received from Cobent has helped us to deploy the system across the UK business with speed realising savings ahead of schedule ..."*

*...we are looking forward to a substantial business benefit and experience for our store colleagues."*
